

DICHROIC COLOUR FILTER

- High Transmission
- Low Heat Absorption
- Long Life

Technology has improved the dichroic coating process to such a degree that the filters come in more colours than ever before. Showcraft has a range of specially designed colours for architectural use. By using the colours of nature's light as a guide we have selected golds and pinks from the sunrise light and dusky blues from the evening twilight. These colours are reproduced in the dichroic filters which will provide those wonderful hues and tones from all types of light fittings.

Colour #	Colour #
