

GLASS COLOUR FILTERS

- Long Life
- Fade Resistant

Glass filters provide a long lasting colour for both indoor and outdoor lighting. The available colours range from soft yellows and pinks to high intensity bold reds and blues. The softer colours provide subtle colour shifts when you need to filter the harshness out of a halogen lamp or to set the mood in an interior space. Bold colours can add dramatic effects to an exterior, when used with spot fittings they provide an opportunity to place defined strips of colour on buildings and objects in support of the overall design. Available in any size to suit all types of fittings.
